ISCB-LA SOIBIO EMBnet 2018 will attract top regional and international scientists in the life sciences and offers a strong scientific program focused on scientific discovery in diverse subject areas through bioinformatics/computational biology. Topics of interest include sequence analysis, evolution and phylogeny, comparative genomics, protein structure, molecular and supramolecular dynamics, molecular evolution, gene regulation and transcriptomics, RNA biology, proteomics, systems biology, ontologies, biological networks, databases and data integration, text and data mining and information extraction, and human health.

The scientific program includes abstract submissions so plan to submit to present your research. Plan to come to learn about the latest developments in the field, network with colleagues, and help shape the future of computational biology and bioinformatics in Latin America! This exciting biannual conference attracts over 300 researchers and students from around the globe.
